WORK EXPERIENCE

Graduate Research Assistant – Accounting Financial Data Analysis

January 2026 – June 2026

Advisor: Prof. JT Thazhathel

- Identified a widening gap between traditional accounting curricula and industry standards for financial analysis automation and visualization skills.
- Developed curricula to introduce undergraduate students to the key skills for automating financial analysis in Python, aimed at removing manual spreadsheet errors.
- Translated complex programming analysis into Tableau dashboard visuals aimed at developing data visualization and storytelling skills for non-technical stakeholders.

QA Associate I

September 2023 – July 2025

Altasciences CDMO

Harleysville, PA

- Collaborated with cross-functional departments to conduct root-cause investigations, implement solutions, and document findings in cGMP compliant technical reports.
- Eliminated documentation bottlenecks and accelerated project delivery cycles, streamlining quality control review workflows while maintaining high data accuracy and adherence to strict operating procedures.
- Spearheaded continuous improvement projects aimed at optimizing site-wide data integrity systems.

PROJECTS

Drexel x Deloitte Datathon | Team Participant, 2nd place winner.

- Researched and processed publicly sourced health datasets to identify modifiable risk factors of high urban cancer diagnosis rates in Philadelphia and Chicago, using Python.
- Statistically evaluated the epidemiological data and converted insights into a public health intervention targeting an innovative city-wide Tobacco Buyback Program supported by a long-term financial ROI and healthcare cost-reduction model.
- Secured stakeholder buy-in for the recommendation by translating complex analytical data into an executive visual dashboard and oral presentation, outperforming competing teams to win 2nd place overall.

Automated Data Governance AI Agent | Case Study

- Identified opportunities to close data governance gaps within a retail case study by implementing a centralized Single Source of Truth (SSOT) using an LLM-powered data governance agent.
- Architected the agent using Stack AI to serve as an organizational SSOT, autonomously extracting, cleaning, and centralizing siloed data streams into a unified repository. Enabled it to feed validated data to downstream operational AI agents, ultimately optimizing operational decision-making and efficiency.

Customer Return Behavior Predictive Model | Machine Learning

- Built a predictive model to analyze customer return behavior from an e-commerce dataset and improve margins.
- Engineered a full data preprocessing pipeline, including cleaning, custom feature generation, and integer-based encoding, to support logistic regression, Random Forest, and XGBoost models.
- Optimized model performance through hyperparameter tuning of XGBoost, improving AUC and identifying key performance drivers of product returns.
- Translated the technical findings for non-technical stakeholders, focusing on business implications.

E-commerce Relational Database Design | Database Architecture and Management

- Identified core operational entities for a mock e-commerce retail business and architected a normalized relational database schema.
- Developed tables in Oracle SQL establishing referential integrity constraints and defining cardinality relationships.
- Populated the database with structured mock data and executed SQL queries to validate system functionality, performance and accuracy.
- Documented the technical system architecture with entity-relationship diagrams and its alignment of operational requirements.

Talent Development | Business Consulting

- Partnered with a \$2B regional financial institution to analyze strategic business challenges as part of an MBA consulting engagement.
- Synthesized internal and external research into actionable recommendations that support executive decision making.
- Collaborated with a multidisciplinary consulting team to develop client deliverables and present strategic recommendations to executive leadership.
- Led a multidisciplinary consulting team by coordinating project planning, facilitating collaboration, and guiding the successful execution of the consulting engagement.

EDUCATION

Drexel University LeBow College of Business
Master of Science in Business Analytics | GPA: 4.0

Philadelphia, PA
December 2026

West Chester University
B.S. Biochemistry & B.S. Chemistry | magna cum laude | GPA: 3.6

West Chester, PA
May 2023

SKILLS

- Technical: Python, R, SQL, SAP (Modules/Reporting), Predictive Modeling, Statistical Analysis, Database Design (Relational Modeling, Normalization)
- BI & Tools: Tableau, Advanced Excel, Microsoft Office Suite (Word, PowerPoint, SharePoint, Teams)
- Data & Governance: KPI Dashboard Development, Data Collection & Validation, Data Governance, AI Prompt Engineering, Large Language Models (LLMs)
- Quality & Regulatory: cGMP, CAPA, Root Cause Analysis, Technical Report Drafting
- Languages & Citizenship: Fluent in Italian and English; U.S. and E.U. citizen
